

Adult tachyarrhythmia

NHS GGC: Adapted with the kind permission of the Resuscitation Council UK (RCUK).

! This algorithm is for peri-arrest tachyarrhythmia of abnormal origin, it is not for sinus tachycardia where the underlying cause should be treated; in sinus tachycardia do not try to normalise the heart rate with antiarrhythmic medication or synchronised cardioversion. Seek expert help if the tachyarrhythmia and/or life-threatening features persist.
