Hospital Infection Management Guidelines Empirical Antibiotic Therapy in Adults

Key to good Antimicrobial Stewardship

BLOOD CULTURES = 40mls (10mls in each of 4 bottles),

RECORD diagnosis and therapy duration on HEPMA

REVIEW IV therapy DAILY and consider IVOST or STOP

Greater Glasgow and Clyde

NB Doses recommended based on normal renal / liver function - see BNF or Renal handbook for dosing advice. For info on antimicrobial contra-indications, cautions and monitoring see BNF

Definition of SEPSIS: INFECTION (includes Systemic Inflammatory Response Syndrome (SIRS*)) WITH evidence of ORGAN HYPOPERFUSION (≥ 2 of: Confusion, < 15 GCS or Resp Rate ≥ 22/ min or Systolic BP ≤ 100 mm Hg). Ensure SEPSIS 6 within one hour if NEWS 27: 1. Blood cultures (& any other relevant samples), 2. IV Antibiotic administration, 3. Oxygen to maintain target saturation, 4. Measure lactate, 5. IV fluids, 6. Monitor urine output hourly.

*SIRS indicated by Temp < 36°C or > 38°C, HR > 90 bpm, RR > 20/ min & WCC < 4 or > 12 x10°/ L. SRS is not specific to bacterial infection (also viral & non-infective causes).

Lower Respiratory Tract Infections

Infective Exacerbation COPD

Antibiotics only if purulent sputum (send for culture along with viral gargle) Dual antibiotic therapy not recommended & increases risk of harm Oral *Doxycycline 200mg as a one-off single dose then 100mg daily or Oral Amoxicillin 500mg 8 hrlv or Oral - Clarithromycin 500mg 12 hrlv

Suspected Viral Respiratory Tract Infection

Antibiotics NOT required unless secondary bacterial infections e.g. COPD exacerbation with purulent sputum (see above) If consolidation treat as per CAP below

COVID-19 guidelines

Flu quidelines

Hospital Acquired

Pneumonia (HAP)

Diagnosis of HAP is difficult and it is often

over-diagnosed. Consider other causes of

clinical deterioration including hospital

early. Seek senior advice. Assess severity

If within 4 days of admission or

admitted from care home

Treat as for CAP

If ≤ 7 days post hospital discharge

or ≥ 5 days after admission:

Non-severe HAP

Oral therapy recommended

Oral *Doxycycline 100mg 12 hrly

or Oral * Co-trimoxazole 960mg 12 hrly

Trimethoprim use with caution may 介 K+

and decrease renal function. Monitor

Severe HAP

+ IV Gentamicin**∆ (max 4 days)

monotherapy

Duration 5 days (IV/oral)

If critically ill discuss with Infection Specialist

Aspiration pneumonia

This is a chemical injury and does not indicate

antibiotic treatment.

Reserve antibiotics for those who fail to

improve with in 48 hrs post aspiration.

IV Amoxicillin 1g 8 hrly

or if true penicillin/beta-lactam allero

IV Clarithromycin 500mg 12 hrly

+ IV Metronidazde 500mg 8 hrly

Duration 5 days (IV/oral)

5 mg/kg 60 - 69 kg

240 mg 70 - 79 kg

280mg ≥ 80 kg

NB If CKD5 give 2.5 mg/kg (max 180 mg)

Actual Body Gentamici Weight Dose

320 mg

360mg

Gentamicin Dose

 $< 40 \, kg$

50 - 59 ka

IV Co-amoxiclav 1.2g 8 hourly

Oral Levofloxacin 500mg 12 hrly

onset COVID-19 and review diagnosis

based on CURB 65 score.

Uncertain if LRTI/ UTI

Send MSSU, sputum and viral gargle Oral * Co-trimoxazole 960mg 12 hrly or Oral *Doxycycline 100mg 12 hrly Do NOT prescribe Co-amoxidav

Review/ clarify diagnosis at 48 hours

Duration if diagnosis remains uncertain MAXIMUM 5 days

Pneumonia

Community Acquired Pneumonia (CAP)

Calculate CURB 65 score

- Confusion (new onset)
- Urea > 7 mmol/L RR ≥ 30 breaths/ min
- BP diastolic ≤ 60 mmHq
- or systolic < 90 mmHg
- Age ≥ 65 years

If patient admitted from a care home

If severe, ensure atypical screen sent,

Non-severe CAP

CURB65 score: ≤ 2 (and no sepsis)

Oral Amoxicillin 500mg 8 htly or Oral *Doxycycline 200mg as a one-off single dose then 100mg daily or Oral - Clarithromycin 500mg 12 hrly

Duration 5 days

Severe CAP

CURB 65 score ≥ 3 or CAP (with any CURB 65 score) PLUS sensis:

Oral • Clarithromycin 500mg 12 hrly PLUS either.

IV Amoxicillin 1g 8 hrly or if requiring HDU/ ICU level care IV Co-amoxiclay 1.2g 8 hrly

Oral A. Levofloxacin Monotherapy 500mg 12 hrly

(NB oral bioavailability 99 - 100 %)

Duration 5 days (IV/oral) Legionella 10-14 days

*Gentamicin/ **Vancomycin

Gentamicin / Vancomycin adult dosing calculators are available via 'Clinical Info' icon on staff intranet GGC Medicines App. See GGC Theran

Vancomy cin If creatinine not available give Vancomycin loading dose as per actual body weight Gentamicin ∆ Avoid Gentamicin in decompensated liver disease or myasthenia gravis or known family history of aminoglycoside auditory

Mild skin/soft tissue infection

Oral Flucloxacillin 1g 6 hrly

or if true penicillin/beta-lactam allergy

Oral *Co-trimoxazole 960mg 12 hrly

or Oral *Doxycycline 100mg 12 hrly

Duration 5 days

Moderate / Severe Cellulitis

Consider OPAT/ ambulatory care

(consult local management pathway).

If requires inpatient management:

If MRSA suspected or if true penicill in/

If rapidly progressive
Add IV Clindamycin 600mg 6 hrly

Duration 7-10 days (IV/oral)

IV Flucloxacillin 2g 6 hrly

Skin/ Soft Tissue Infections

Gastrointestinal Infections

Gastroenteritis Confirm travel history/other risk factors

Antibiotics not usually required and may be deleterious in E.coli O157 Consider viral causes

C. difficile infection (CDI)

Treat before lab confirmation if high clinical suspicion. Discontinue if toxin

Intra-abdominal sepsis

IV Amoxicillin 1g 8 hrly +Oral/ IV Metronidazole 400mg / 500mg +IV Gentamicin**∆ (max 4 days))

If eGFR < 20 mL/min/1.73 m²

IV Piperacillin/Tazobactam 4.5g 12 hourly (Monotherapy)

IV Vancomvcin ** Oral/ IV Metronidazole 400/500mg 8 hrlv IV Gentamicin**Δ (max 4 days)

IV/Oral Ciprofloxacin

Oral/ IV Metronidazole 400/500mg 8 hrly Total Duration 5 days (IV/oral)

Assuming source control See Advice for Antibiotic therapy following 4 days IV gentamicing

Biliary tract infection

As above except metronidazole not routinely required unless

SBP confirmed if ascitic counts

>250/mm³ or

EDTA automated count:

WCC > 0.5 or polymorphs > 0.25 x10⁹/L

If not receiving co-trimoxazole

Oral * Co-trimoxazole 960mg 12 hourly

If receiving co-trimoxazole prophylaxis:

IV Piperacillin/Tazobactam 4.5g 8 hourly

Oral ***Levofloxacin 500mg 12 hrly

Decompensated Chronic

liver Disease with Sepsis

Unknown Source

IV Piperacillin/Tazobactam 4.5g 8 hourly

Oral As**Levofloxacin 500mg 12 hrlv

Duration 7 days (IV/oral

Duration 7 days (IV/oral

Pancreatitis

Does not require antibiotic therapy unless complicated by cholangitis.

Spontaneous Bacterial Peritonitis (SBP)

Manual: WCC >500/mm3 or neutrophils

Oral *Doxycycline 100mg 12 hrly

Prophylaxis: 3 days

artment" for prophylaxis

Severe bite IV Co-amoxiclav 1.2g 8 hrly

Duration 7 days (IV/oral)

Suspected Necrotising Fasciitis

pain or presence of acute organ dysfunction/ hypoperfusion including hypotension.

Seek urgent surgical/ orthopaedic review. Urgent DEBRIDEMENT/

IV Flucloxacillin 2g 6 hrlv + IV Benzylpenicillin 2.4g6 hrly

+ IV Clindamycin 1.2g 6 hrly + IV Gentamicin**∆ (max 4 days) If MRSA suspected or if true

Rationalise therapy within 48-72

Based on: response, microbiology results infection specialist review Duration 10 days (IV/oral) or as per infection specialist

Infected human/animal bite

Non-severe bite

Duration- Treatment: 5 days

See "Adult Antibiotic Wound

+ Oral Metronidazole 400mg 8 hrlv + Oral A-Ciprofloxacin 500mg 12 hrlv

Consider in SSTI with disproportionate

EXPLORATION may be required

+ IV Metronidazole 500mg 8 hrly

penicill in/ beta-lactam allergy

REPLACE Flucioxacillin + Benzylpenicillin with IV Vancomycin

Oral Co-amoxiclav 625mg 8 hrly

UTI in Pregnancy See NHS GGC Obstetric guidance

Lower UTI/cystitis

Don't treat asymptomatic bacteriuria. Obtain urine culture prior to antibiotic. In women often self-limiting, consider delayed

Antibiotics if significant symptoms ≥ 2 of dysuria adult women < 65 years +ve urine nitrite)

Oral Nitrofurantoin 50mg 6 hourly or Nitrofurantoin 100mg MR 12 hourly or Oral • Trimethoprim 200mg 12 hrly **Duration: Females 3 days,**

Males 7 days Nitrofurantoin contraindicated, Trimethoprimuse with

Upper UTI

Obtain urine for culture prior to antibiotic. Exclude pneumonia if loin/back pain

Non-severe/without sepsis

Oral Ciprofloxacin 500mg 12 hrly

Duration 7 days **UROSEPSIS/ Pyelonephritis** with fever

IV Gentamicin**∆ (max 4 days) Oral A Ciprofloxacin

Duration 7 days

Catheter related UTI Remove/ replace catheter and send asymptomatic bacteriuria

Symptomatic bacteriuria without sepsis

Give single dose of IV Gentamicin**A immediately prior to catheter removal or if IV route not available give single dose of oral A-Ciprofloxacin 500mg 30 minutes before catheter change.

Ciprofloxacin 500mg single dose Symptomatic bacteriuria with sepsis Treat as per pyelonephritis/culture

Duration 7 days (IV/oral)

Suspected prostatitis Consider in all men with lower

UTI symptoms Refer to Urology Oral A-Ciprofloxacin 500mg 12 hrly or Oral • Trimethoprim 200mg 12 hrly if sensitive organism

Duration 14 days

Septic arthritis/Osteomyelitis / Prosthetic joint infection

Urgent orthopaedic referral if underlying metal work or recent irgery. Obtain blood cultures (and i not acutely unwell/ septic, obtain to antibiotic therapy

Native joint IV Flucloxacilin 2g 6 hrly

If MRSA suspected or if true penicillin/beta-lactam allergy

IV Vancomycin** If considered high risk for Gram negative infection e.g. immunocompromised, recurrent UTI or sickle cell disease:

ADD IV Gentamicin** (max 4 days) Duration and IVOST: discuss with

Usually 4-6 weeks (IV/oral) if diagnosis confirmed.

Prosthetic joint Antibiotic therapy should not be started in a clinically stable patient until intra-operative

samples obtained IV Vancomycin* + IV Gentamicin**∆ (max 4 days) Duration and IVOST: discuss with Infection Specialist at 72 hours

Diabetic foot infection/ osteomyelitis

Assess ulcer size, probes to bone, europathy, peripheral vascular disease MRSA risk. For outpatient therapy

consult diabetic clinic guidelines IV Flucloxacillin 2g 6 hrlv +Oral Metronidazole 400mg

If SEPSIS or SIRS≥2 Add IV Gentamicin**∆ (max 4 days)

lactam allerov IV Vancomycin** Oral Metronidazole 400mg 8hrly (Metronidazole oral bioavailability

If MRSA suspected or if true penicillin/l

80-100%) If SEPSIS or SIRS ≥ 2:

Add IV Gentamicin**∆ (max 4 days) f eGFR < 20 mL/min/1.73 m² REPLACE Gentamicin with Oral **Ciprofloxacin

Duration/IVOST Discuss with Infection Specialist Vascular graft infection

IV Flucloxacillin 2g 6hrly + IV Gentamicin**∆ (max 4 days) MRSA suspected or if true penicillin/ beta

IV Vancomycin**

management with Infection specialist

CNS Infections

Urgent Blood Cultures then IV Antimicrobial Therapy within ONE hour

LP safe without CT scan UNLESS seizures, GCS ≤ 12. CNS signs. apilloedema or immunosuppression If CT: Blood cultures and antibiotics BEFORE CT scan

Use Meningitis/ Encephalitis order set on Trakcare, Blood and CSF Glucose. LP contraindicated if: Brain shift

rapid GCS reduction. Resp/cardiac compromise, severe sepsis, rapidly evolving rash, infection at LP site. coagulopathy, thrombocytopenia, anticoagulant drugs

Possible bacterial meningitis IV Ceftriaxone 2q 12 hrly

IV Chloramphenicol 25mg/kg (max 2g) If bacterial meningitis strongly suspected

ADD IV Dexamethasone 10mg 6 hrly Prior to, or at the same time as antibiotics and refer to ID f age ≥ 60 years, immunosuppressed

pregnant, alcohol excess, liver disease ADD IV Amoxicillin 2g 4 hrly to Ceftriaxone

D IV *Co-trimoxazole 30mg/kg 6 hrly to Chloramphenicol Duration of antibiotics:

Discuss with Infection Specialist Possible viral meningitis

Usually diagnosed after empirical management and exclusion of bacterial meningitis. Viral meningitis does NOT

 $immun\,ocompromi\,sed.$ Discuss with Infection Specialist Confusion or reduced consciousness Encephalitis NOT meningitis

Possible viral encephalitis Consider if confusion or reduced level consciousness in suspected CNS infection Ensure CSF viral PCR is requested. May not be possible to differentiate from bacterial meningo-encephalitis.

IV Aciclovir 10mg/kg 8 hrly Discuss all patients with infection

neuro-imaging to establish diagnosis Duration: Confirm with infection

Sensis where source unknown

Review all anatomical systems, gentamicin resistance

Review diagnosis DAILY Add cover for Saureus infection if: healthcare associated, recent related, PWID

Add cover for MRSA infection if;

Source unknown

IV Amoxicillin 1g 8 hrly

If MRSA suspected or if true penicillii IV Vancomycin³

Possible Infective Endocarditis Always seek senior specialist advice and

Native heart valve IV Amoxicillin 2a 4 hrlv

IV Gentamicin ∆ (*synergistic dosing)

+ IV Gentamicin Δ (*synergistic dosing) Prosthetic heart valve

within 72 hours in Adults guideline on StaffNet for dosing

perform CXR and consider other imaging/laboratory investigations Review previous microbiology infection specialist if previous

Add cover for Streptococcal infection if

+ IV Gentamicin**∆ (max 4 days) ADD IV Flucloxacillin 2g 6 hrlv

IV Gentamicin**∆ (max 4 davs)

f eGFR < 20mL/min/1.73 m², **REPLACE** Gentamicin with Oral/IV A-Ciprofloxacin Duration: Review with response/

ADD IV Clindamycin 600mg 6 hrly

refer to cardiology.

► IV Flucloxacillin 2g 6 hrly if < 85kg</p> (4 hrly if ≥ 85kg)

IV Vancomycin*

IV Gentamicin ∆ (*synergistic dosing) Discuss with Infection Specialist

!! Important Antibiotic Drug Interactions & Safety Information !! *Doxycycline/ Quinolone: reduced absorption with iron, calcium, magnesium & some nutritional supplements. See BNF (Appendix1) or see pharmacy for advice.

"Clarithromycin/ Quinolone: risk of serious drug interactions see BNF (appendix 1) or seek pharmacy advice. May also prolong the QTc interval, avoid (where possible) if other QTc risk factors. If or all route compromised give IV (see BNF for dose). Quinolones e.g. Ciprofloxacin, Levofloxacin Stop treatment at first signs of a serious adverse reaction (e.g. tendonitis), prescribe with caution for people over 60 years and avoid co administration

with a corticosteroid. See BNF for dosing advice in reduced renal function Trimethoprim* / Co-trimoxazole* Use with caution, may increase K+ and decrease renal function. Monitor U+Es. If oral route compromised, co-trimoxazole can be given IV (see BNF for dose). Latest Version: https://clinicalguidelines.nhs.ggc.org.uk/adult-infection-

INFECTION SPECIALISTS: Duty Microbiologist, Infectious Diseæe (ID) Unit at QEUH. FOR FURTHER ADVICE: Clinical/Antimicrobial Pharmadst, local Respiratory Unit (for RTI) or from GGC Therapeutic Handbook. Infection Control advice may be given by Duty Microbiologist

NHS GGC AUC Aug 2024 Updated Sept 2024 Review Aug 2026

Recent Chemotherapy (< 4 weeks). high dose steroids (e.g. prednisolone > 20 mg/day for > 2 weeks), other immunosuppressants (e.g. anti-TNF cyclophosphamide). Stem cell/solid organ transplant or primary immunodeficiency

Immunocompromised Patient

Neutropenic Sepsis Neutrophils ≤ 0.5 x 10 9/ L + fever

(temperature > 38°C or 37.5°C on 2 occasions 30 min apart) / hypothermia < 36°C OR chills, shivers, sweats or other symptoms suggestive of infection. chemotherapy (neutrophils < 1x109/L) and who exhibit any of the symptoms above are presumed to be neutropenic and septic.

Immunocompromised neutrophils AND source of infection identified

Manage as per infection management

guidelines based on anatomical source Neutropenic sepsis or Immunocompromised with fever and source of infection unknown

See guideline Initial Management of Neutropenic Sepsis or Sepsis of Immunocompromised Adults which is

available on StaffNet by clicking:

→Clinical Info

→NHSGGC Clinical Guideline Platform →Adult infection Management

→ Secondary Care - Treatment

(scot.nhs.uk)
