Gentamicin Plot Graph

Graph: Gentamicin concentration (mg/L) versus Time (hours) after the start of the infusion.

Y-axis: Gentamicin concentration (mg/L), scale from 0.0 to 10.0.

X-axis: Time (hours) after the start of the infusion, scale from 4 to 24.

Target sampling time (between 6 and 14 hours)

If the measured concentration is above this curved line, withhold until the concentration is <1 mg/L and seek advice

Give the same dose every 48 hours

If the measured concentration is below this curved line, give the same dose every 24 hours
